Delphi Tutorial - March 2007 - Issue 4 - Programming in Delphi A manual on development of the first program "Hello World" in Delphi is also identical to the manual versions for VB, Java and C++: Delphi Tutorial - April 2007 - Issue 4 - Programming in Delphi Requirements for Delphi Programming Tutorial: First, you should at least have basic knowledge in Windows and Windows Forms. All program tutorials use Windows Forms as a display environment for programs. Second, you should have Delphi environment. If you do not, install it now. For VB and Java, you can download compatible installers at the project download page. For C++, you may run the configuration program from the following link, and make sure you have selected Windows SDK, Microsoft Visual C++ Compiler for applications and libraries, and Windows DDK. Third, your computer should have at least 1 GB of RAM memory. Fourth, your computer should run Windows XP, Vista or Windows 7. Fifth, in case you have not already done so, download the sample of Delphi installed to your computer. It will help you to get familiar with Microsoft Windows GUI programming. Sixth, it is highly recommended to have at least 1 hour of training before starting the work on the first program. Next, download an up to date version of program Builder and install. Finally, when you start the tutorial, you may download it from the SourceForge project page and read it through.
